What is WhereFy-so?

WhereFy-so is a cloud based IoT platform enabling solar companies to remotely monitor their plant's performance and instantly detect failures which helps them reduce the overall O&M cost and improve the plant's generation.

Key features:

Insightful Performance reports

Enabling historical data analysis to analyze plant as well as individual asset performance on daily, monthly & yearly basis

Custom dashboards

Fully customizable dashboards for CXOs to on-ground teams to help them with relevant information & outcomes

Anomaly Detection

Get real time instant fault alerts via SMS & email in case of system failure & all other issues occurring in the assets

Preventive Maintenance

Get optimized business outcomes using condition based monitoring and real-time comparative analytics

Connect all assets

Solar PV System

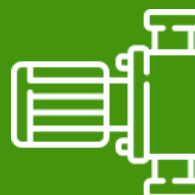

Solar PV Strings

Energy Meter

Weather Station

Water Pump
